DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 8-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Claim 8 recites the limitation "the frame" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

5. Claims 1-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Taylor et al (US 5,876,219).

Regarding claims 1-11, Taylor et al disclose an electrical connector comprising:

Art Unit: : 2833

a dielectric material housing (10);
a plurality of solder balls (48) surface mount contacts;
areas (17) of reduce rigidity of the frame of the housing which are located at position furthest from a neutral point of the connector and comprises a notch (17) and a slot (60), wherein the areas of reduced rigidity are disposed to absorb stress and accommodate warp.

Regarding claims 12-15, Taylor et al disclose a method of reducing rigidity in a housing of an electrical connector, comprising:

determining a neutral point of the connector; and
removing a portion (17) of the housing (10) at a position furthest to the neutral point, wherein the position is located to absorb stress and accommodate warp and is one of a slot (60) and a notch (17).

Conclusion
